ANSWER 1 OF 3 CAPLUS COPYRIGHT 2007 ACS on STN
TI
    Novel nanoparticulate nimesulide compositions
```

AB The present invention provides nanoparticulate nimesulide compns. The compns. preferably comprise nimesulide and at least one surface stabilizer adsorbed on or associated with the surface of the nimesulide particles. The nanoparticulate nimesulide particles preferably have an effective average particle size of less than about 2000 nm. The invention also provides methods of making and using nanoparticulate nimesulide compns. An aqueous solution of 1% (weight/weight) Plasdone S-630 was combined with 4.25 g of nimesulide (5% weight/weight) and stirred for 1 h at 4200 rpm with chilled water (10°) recirculated through the milling chamber. The process yielded a colloidal dispersion of nimesulide with a mean particle size of 150 nm, a D50 of 124 nm, a D90 of 256 nm, and a D95 of 293 nm.

TI Composite product obtainable by co-grinding of an active principle with a N-vinyl-2-pyrrolidone/vinyl acetate copolymer

The present invention describes a method for obtaining composite products AB comprising an active substance supported by a carrier, in which the carrier is the linear copolymer of N-vinyl-2-pyrrolidone (NVP) with vinyl acetate (VA). The composite products are obtained by co-grinding of the dry mixture of the active substance and of the aforesaid carrier. The composite products thus obtained have better physicochem. properties (lower melting enthalpy and/or lower melting temperature of the active substance) and a higher dissoln. speed with respect to composite products obtained with the same-co-grinding time with other carriers used in prior techniques. Furthermore, the composite products obtained with the technique according to the present invention have the appearance of powders that are easier to work from a pharmaceutical point of view (flow, compression) with respect to composite products previously obtained with other carriers. For example, 16.6 g of nimesulide were mixed with 49.8 g of NVP/VA for 15 min. The powder was then poured into the grinding chamber of a low energy vibrational mill and the grinding was carried out for 2 h.
